## **Important Coloured Mulch Information**

### **General information**

Coloured mulch is composed of shredded wood and colour enhanced with naturally occurring soil pigments; e.g. iron oxide for red. These colours are designed for safe use around plants, children and pets.

Colour-enhanced mulch is colourfast as soon as it dries and typically will maintain its brilliance for over a year.

In interest of ensuring your satisfaction with your purchase, we would like to point out a potential problem. It is not uncommon to experience colorant washing from the colored mulch, especially during periods of heavy rain. As with any other item that is being painted, the paint must have ample time to dry before it is no longer vulnerable to color wash-off during a rain storm. Please take this fact into consideration and do not install if there is not enough time for the material dry completely before the rain begins. We regret any inconvenience this may cause in installation plans, but adhering to this method will help with overall product satisfaction

Once the color dries, it will remain on the mulch with little or no runoff. However, as with all colored mulches, the color will not dry until after the mulch has been applied, and allowed to fully dry. Colored mulch should never be dumped on a surface which can stain, such as a concrete driveway or walkway, or pavements. In addition, colored mulch should not be installed directly next to such a surface if heavy rain is anticipated or if sprinklers will flood the bedding area and cause a runoff onto this surface, before the colored mulch is allowed to dry. In most cases, if there is a runoff of color, it can be easily washed off with the high-pressure spray of a garden hose. In the worst case the application of CLR or Rust Stain Remover should remove most remaining stain.
